ABSTRACT

This annotated bibliography offers an international perspective on attitudes toward adolescents and young adults with disabilities, and policies and service delivery systems impacting these adolescents and young adults. The bibliography provides the author, title, source, and abstract for 19 resources on attitudes toward people with disabilities, 20 resources on community services, 15 resources on health services, 28 resources on educational/vocational services, and eight resources on epidemiology and policy. The bibliography includes monographs, reports, · proceedings, reference books, and periodical articles. (JDD)

A project of the:

Society for Adolescent Medicine
Adolescent Health Program

The National Center for Youth witi. Disabilities is a collaborative project of the Society for Adolescent Medicine and the Adolescent Health Program at the University of Minnesota. The Center is supported through a grant from the Maternal and Child Health Bureau, Division of Services for Children with Special Health Needs, Department of Health and Human Services, #MCJ27361-010. The Center's mission is to raise awareness of the needs of youth with disabilities; foster coordination and collaboration among agencies, professionals, parents, and youth in planning and providing services; and provide technical assistance and consultation.

For additional information on the Society for Adolescent Medicine, contact:

Society for Adolescent Medicine 19401 East 40 Highway Suite 120 Independence, MO 64055 816/795-TEEN

For additional information on the National Center for Youth with Disabilities, contact:

National Center for Youth with Disabilities

or 612/626-2825

The National Center for Youth with Disabilities (NCYD) is committed to raising awareness of the needs of adolescents and young adults with chronic illnesses and disabilities. In keeping with our mission, we have prepared this bibliography focusing on international issues that address attitudes, policy, and the service delivery system serving adolescents and young adults with disabilities and chronic illnesses. We hope that you will take the time to read through this bibliography and share it with anyone you believe would benefit from the information.

The information in this bibliography is drawn from the computerized database of the NCYD Resource Library. Other annotated bibliographies available, free of charge, from the NCYD Resource Library include:

Transition from Pediatric to Adult Health Care for Youth with Disabilities and Chronic Illness
Adolescents with Chronic Illnesses—Issues for School Personnel
Promoting Decision–Making Skills by Youth with Disabilities—Health, Education, and Vocational Choices
An Introduction to Youth with Disabilities
Substance Use by Youth with Disabilities and Chronic Illnesses
An Introductory Guide for Youth and Parents

You can also request specialized searches of the NCYD Resource Library on topics of your choosing simply by calling an NCYD information specialist. This person will then send you the requested information in a format similar to this bibliography. The database is also directly accessible, through menus or a command system, for interested individuals with their own computer and modem. Either way, you can easily receive current information on youth with disabilities that is specific to your particular needs and interests.

Thank you for your interest in the National Center for Youth with Disabilities. If you would like additional information on our Center, or would like to request information about the Resource Library, please call our information specialist at 1-800-333-6293 (toll-free in the United States) or 612-626-2825.

I. ATTITUDES TOWARD PEOPLE WITH DISABILITIES

AUTHOR | Armstrong RW; Rosenbaum PL; King SM;

TITLE A randomized controlled trial of a "buddy" programme to improve

children's attitudes toward the disabled.

SOURCE | Dev Med Child Neurol 1987 Jun; 29(3): 327-36;

ABSTRACT | Examined the effects of a buddy program on 91 Canadian children's (age 9-13)

attitudes toward children with disabilities. Findings indicate that a buddy program can significantly improve both attitudes of buddy children and their parents.

AUTHOR | Chan F; Hedl JJ; Parker HJ, et al.;

TITLE Differential attitudes of Chinese students toward people with disabilities: A

cross-cultural perspective.

SOURCE Int J Soc Psychiatry 1988 Winter; 34(4): 267-73;

ABSTRACT | Investigated the attitudes of 338 Chinese students (mean age = 16.9 years) toward

people who have physical disabilities, emotional disturbances, and mental retardation. Findings indicate that people who have emotional disturbances or mental retardation were given similar evaluations, although both groups were evaluated lower than people who have physical disabilities. The positive attitudes toward people with physical disabilities is consistent with western literature, while the similar attitudes toward people with emotional disturbance and mental

the similar attitudes toward people with emotional disturbance and in

retardation contradict western literature.

AUTHOR DeCaro JJ; Dowaliby FJ; Maruggi EA;

TITLE A cross-cultural examination of parents' and teachers' expectations for deaf

youth regarding careers.

SOURCE | Br J Educ Psychol 1983 Nov; 53(Part 3): 358-63;

ABSTRACT | This study compared the attitudes of English parents and teachers of deaf youth

regarding appropriate occupations for these youth to the attitudes of Italian parents and teachers. No differences were found between parents and teachers or between countries. Differences did emerge between appropriate occupations for deaf versus hearing youth, with safety and communication issues distinguishing

between careers.

AUTHOR Doherty J; Obani T;

TITLE | The development of concepts of handicap in adolescence: A cross-cultural

study—Part 1.

SOURCE | Educ Studies 1986; 12(1): 95-113;

ABSTRACT | This paper, the first in a series, presents a short literature review and

methodological overview that seeks to chart the development of the concept of "handicap" in the non-handicapped adolescents. The study in olved interviews with 306 Nigerian and British adolescents (age 11–17) and aims to provide insight into the implementation of community integration for children and

6

adolescents with disabilities.

Doherty J: Obani T:

TITLE

The development of concepts of handicap in adolescence: A cross-cultural

study—Part 3.

SOURCE

Educ Studies 1986; 12(3): 291-311;

ABSTRACT

In this cross-cultural (Great Britain and Nigeria) comparison of adolescent attitudes concerning different categories and effects of handicap, it was discovered that age/maturity is the most relevant factor in the level of understanding. Also, girls overall achieve more mature levels of understanding regarding the effects of handicapping conditions. Not significant was nationality or attitude in the development of adolescent understanding of the effects of handicap.

AUTHOR

Florian V; Kehat D;

TITLE

Changing high school students' attitudes toward disabled people.

SOURCE

Health Soc Work 1987 Winter: 12(1): 57-63:

ABSTRACT

This Israeli study examined three aspects of adolescents' attitudes toward people with physical disabilities; cognitive (knowledge level and beliefs), emotional (feelings), and behavioral (actual actions toward or in the company of someone with a disability). Through a multi-method educational program (employing information, values-clarification, and experiential learning strategies), experimenters acheived the greatest effect on the emotional component of attitudes. They speculate that this was achieved through the provision of opportunities for integrated social interaction. Statistically significant behavioral changes were not acheived. The authors suggest this is due to a lack of intimate and prolonged integrated social contact.

AUTHOR

Florian V; Weisel A; Kravetz S; et al.;

TITLE

Attitudes in the kibbutz and city toward persons with disabilities:

A multifactorial comparison.

SOURCE

Rehab Counsel Bull 1989 Mar; 32(3): 210-18;

ABSTRACT | Compared the attitudes toward people with disabilities of 290 Israeli adolescents living on a kibbutz with those living in a city. Attitudes related to behavior were more positive for kibbutz youth than city youth, while no differences were found for attitudes related to emotional experiences.

AUTHOR

Gillies P: Shackley T:

TITLE

Adolescents' views of their physically handicapped peers -

A comparative study.

SOURCE

Educ Res 1988 Jun; 30(2): 104-9;

ABSTRACT | Two American schools were used for the focus of this study that explored adolescents' views of their peers who had physical handicaps. One school was integrated with students who had physical handicaps and one school was not integrated. The results from this study suggest that non-disabled adolescents in integrated schools are more likely than their non-disabled, non-integrated peers to hold a positive view of other young people with physical handicaps.

Katz S; Kravetz S; Karlinsky M;

TITLE

Attitudes of high school students in the United States regarding disability:

A replication of an Israeli study.

SOURCE

Rehab Counsel Bull 1986 Dec; 30(2): 102-9;

ABSTRACT

A survey of 143 17–18 year old Israeli high school students indicates that attitudes toward people with disabilities were positively influenced by whether the disability was of military orgin and by whether the person had no control over the cause of the disability. In the United States, attitudes toward people with disabilities were unaffected by whether the disability was of military or civilian origin or by whether the person was responsible for the disability. Also, people with disabilities were more positively evaluated in the United States than in Israel.

AUTHOR TITLE SOURCE Margalit M; Miron M;

The attitudes of Israeli adolescents toward handicapped people.

Except Child 1983 Nov; 30(3): 195-200;

ABSTRACT

The attitudes of 262 Israeli high school students (age 12-17) toward people with disabilities were investigated. Findings indicate that attitudes tend to be affected by the limitations of people with disabilities, feelings of reservation and shame, and the rights of people with disabilities, but not by type of handicap. Females tended to express more accepting attitudes toward people with disabilities and to be less concerned with the limitations of people with disabilities and feelings of shame and reservation.

AUTHOR TITLE SOURCE McConkey R; McCormack B; Naughton M;

A national survey of young people's perception of mental handicap.

J Ment Defic Res 1983 Sep; 27(Part 3): 171-83;

ABSTRACT

A national survey of 1,340 Irish students' (age 15–16) attitudes toward people with mental disabilities. Data indicate that students who had previous contact with people who have mental disabilities were more knowledgable about disabilities and had more positive attitudes toward people with mental disabilities. Also, females had significantly more interactive contact, confidence at meeting, and were more willing to help people with mental disabilities than were males.

AUTHOR TITLE SOURCE McConkey R; McCormack B; Naughton M;

Changing young people's perceptions of mentally handicapped adults.

J Ment Defic Res 1983 Dec; 27(Part 4): 279-90;

ABSTRACT

Studied 420 Irish students' (age 15–17) attitides toward people with disabilities through a short educational program involving contact with a group of adults who were mentally retarded. Results indicate the program was effective at increasing students' confidence in meeting people who are mentally retarded and students' knowledge of mental retardation. A replication of the study using teachers and adult day care staff showed the program was also effective with a variety of presenters.

AUTHOR McConkey R; Templer S;

TITLE Videocourses for training staff in developing countries: An example with

severely retarded and multiply handicapped children.

SOURCE | Int J Rehab Res 1987; 10(2): 206-10;

ABSTRACT | An evaluation and description of a videocourse for staff that serve people with

disabilities in Zimbabwe. The course aims to promote awareness of individuals with disabilities, provide staff with activities to promote client's physical, social, and cognitive development, train staff in assessing developmental levels, and to establish individual program plans for each client. Results of the evaluation indicate that videocourses are effective methods to train staff in developing

countries.

AUTHOR | Obani T; Doherty J;

TITLE The development of concepts of handicaps in adolescence: A cross-cultural

study, Part II.

SOURCE | Educ Studies 1986; 12(2): 191-212;

ABSTRACT In a study of Nigerian and British adolescents' concepts of the causality of

disabilities, it was found that age is an important predictor and nationality has

some effect, although probably a modifying role.

AUTHOR | Obani T; Doherty J;

TITLE The development of concepts of handicaps in adolescence: A cross-cultural

study. IV. The rehabilitation of the handicapped.

SOURCE | Educ Studies 1987; 13(2): 187-99;

ABSTRACT In a study of British and Nigerian adolescents' understanding of the rehabilitation

of people with disabilities, it was found that age is the single most important predictive factor with gender being significant to a lesser degree. Attitudes toward

people with disabilities was not an important factor.

AUTHOR | Stancic V:

TITLE | Some subjective and objective prerequisites to educational integration of

handicapped children.

SOURCE Int J Rehab Res 1984; 7(3): 273-82;

ABSTRACT | Investigated the attitudes of 3,263 Yugoslavian 'eachers, parents, and students

toward people with disabilities and toward the integration of students with disabilities into regular education. Data indicate that in accordance with U.S. studies, teachers from outside the city tend to hold more positive views of integration than teachers from within the city, and that young male teachers who have worked with children with disabilities have the most favorable attitudes

toward integration.

AUTHOR | Walker S;

TITLE A comparison of attitudes and knowledge of Ghanaian college students

relative to the mentally retarded.

SOURCE | Appl Res Ment Retard 1982; 3(2): 163-74;

ABSTRACT | Compared attitudes toward people with disabilities of 146 college students and

nonstudents in Ghana, West Africa. Findings indicate that greater knowledge about disabilities is associated with less favorable attitudes toward people with disabilities. Results are explained in terms of traditional cultural beliefs toward

disabilities.

AUTHOR | Weisel A;

TITLE | Contact with mainstreamed disabled children and attitudes towards

disability: A multidimensional analysis.

SOURCE | Educ Psychol 1988; 8(3): 161-8;

ABSTRACT | Examined the attitudes of 156 Israeli students who have experienced varying

degrees of contact with students who have a hearing impairment. No differences were found between the attitudes of students who were in integrated classrooms and those students who were in non-integrated schools. Students who had moderate contact with students who have hearing impairments expressed the most

negative attitudes toward people with disabilities.

AUTHOR | Weisel A; Kravetz S; Florian V; et al.;

TITLE The structure of attitudes toward persons with disabilities: An Israeli

validation of Siller's Disability Factor Scales-General (DFS-G).

SOURCE | Rehab Psychol 1988 Winter, 33(4): 227-38;

ABSTRACT Investigated the cross-cultural validity of Siller's Disability Factor Scales-General

on a sample of 658 Israeli adolescents. Findings indicate that both Israeli and American adolescents exhibit similar attitudes toward people with disabilities. There is also support for the notion that attitudes toward disabilities are linked to interpersonal and intrapersonal pressures that transcend cultural differences.

10

II. COMMUNITY SERVICES

AUTHOR

Abang TB;

TITLE

Disablement, disability, and the Nigerian society.

SOURCE

Disability Handicap Society 1988; 3(1): 71-7;

ABSTRACT

Issues surrounding disabilities in developing countries. Most of these disabilities are preventable, given greater medical resources. Common Nigerian perceptions of disabilities, influenced by myth and superstition, are described. Nigerian society is examined within the context of rights to access, medical care, and education.

AUTHOR

Ayer S;

TITLE SOURCE Community care: Failure of professionals to meet family needs.

Child Care Health Dev 1984 May: 10(3): 127-40:

ABSTRACT

Following a brief history of services for individuals who have mental handicaps in Great Britain, this article reports on a study of 120 mothers engaged in home care of their children (age 3-17) who have severe mental handicaps. Findings indicated: many mothers were unaware of available services; services are determined by professional, not client, perspectives; services may offer to substitute for, rather than reinforce, the mother's perceived role. Parents are thus seeking support through mutual aid and self-help groups.

AUTHOR TITLE SOURCE Baldwin S; Godfrey C; Staden F;

Childhood disablement and family incomes.

J Epidemiol Community Health 1983 Sep; 37(3): 187-95;

ABSTRACT

This British study found that families (n = 1,078) with a child who has a severe disability had significantly lower incomes than control families. The strength of this effect increased with the age of the youngest child in the family. Both mothers' and fathers' earnings reflected this effect. Mothers of children with disabilities were less likely to be employed at all; when they were employed, they tended to work fewer hours. Disability benefits fell far short of closing the gap between families who have children with disabilities and control families.

Brimblecombe FS;

TITLE

The needs of young intellectually retarded adults. Eighteenth Blake Marsh lecture delivered before the Royal College of Psychiatrists, February 1984.

SOURCE

Br J Psychiatry 1985 Jan; 146: 5-10;

ABSTRACT

This lecture assesses the current system of services for adolescents with mental retardation and young adults in Great Britain, with particular Litention to services related to work; housing; and health, education and social services. Current providers are charged with having become rigidly committed to their own perceptions of the needs of these individuals. Professionals are encouraged, rather, to turn to the experience of the individuals with disabilities, their surroundings and families, to identify what the service system needs to provide. Graphic models are presented. Recommendations are given for the training of service providers. Education is asserted as the key to a better future for all concerned.

AUTHOR

Coyne A; Brown ME;

TITLE SOURCE

Developmentally disabled children can be adopted.

Child Welfare 1985 Nov; 64(6): 607-15;

ABSTRACT

This survey of 799 adoption agencies in the U.S. and Canada found that placement of children with developmental disabilities is not as difficult as general opinion might dictate. Rural agencies may be even more successful than urban agencies. Adoptions occur for children of all ages: 9.5% of identified children were placed when they were 13 or older. Former foster parents accounted for only 26% of adopters. The disruption rate for all adoptions was low.

AUTHOR

Farguhar JW:

TITLE

The youth diabetic (YD) project at Firbush.

SOURCE

Diabetic Med 1985 Sep; 2(5): 424;

ABSTRACT |

Description of a British self-help group for young adults (age 18–23) with diabetes. The group promotes social interaction and recreation, health education, and advocacy.

AUTHOR

Foller as S; Michalsen H; Bentsen BS;

TITLE

Social-Medical aspects of cystic fibrosis in Norway. II. Economy and housing

situation.

SOURCE

Scand J Gastroenterol (Suppl.) 1988 Jun; 143: 56-9;

ABSTRACT

This study compared the economic status of 90 Norwegian families with a child with cystic fibrosis (CF) to control families. Families with adolescents with CF reported fewer special needs in housing and lower expenses for care than did families of younger children with CF. Data indicate that CF families may receive less unpaid help from family and friends because of the perceived added reponsibility involved in taking care of a sick child. The rates of use of Norwegian state financial aid programs are discussed.

AUTHOR Gaillard F; Converso GD;

TITLE | Cost and quality of psycho-pedagogic institutional care: The case of 56

establishments in the Swiss canton of Vaud.

SOURCE | Int J Rehab Res 1988; 11(2): 109-15;

ABSTRACT | Evaluated residential institutions in Switzerland that serve children and

adolescents with a variety of disabilities. A factor analysis indicates that the cost of care is directly proportional to the quality of care, and that the increasing cost of residential placement is primarily due to an increase in the number of

specialized service providers.

AUTHOR | Hirst M;

TITLE Dependency and family care of young adults with disabilities.

SOURCE | Child Care Health Dev 1985 Jul; 11(4): 241-57;

ABSTRACT | This British survey interviewed the primary care givers (n = 291) in families with

young adult members (18-22 years of age) who had a severe disability. The study found that most of these young adults were highly dependent on others for

personal care, mobility, and daily living, although over half of them had received training in these areas. Mothers were most often the primary care givers. The

author suggests professionals recognize the resulting burden on mothers.

AUTHOR | Hirst MA;

TITLE Disabilities, benefits, and disability benefits.

SOURCE | Int J Rehab Res 1986; 9(1): 3-12;

ABSTRACT | The relationship between type of disability and amount of benefit was

investigated in a sample of 248 young adults (age 18-22) in England who have severe disabilities. Findings indicate that those with the most severe disabilities did not receive the most financial support and that those with similar disabilities often receive different amounts of financial support. Individuals with physical disabilities tend to receive more financial support than those with mental disabilities despite reports which show that costs associated with mental disabilities are equal or greater than costs associated with physical disabilities.

AUTHOR | Kohler L:

TITLE Handicapped children in the nordic countries.

BOOK Social Integration of Young People with Chronic Diseases.

EDITOR Baldew-Visser S: Baldew IM;

SOURCE | Foundation for Chronic Diseases in Children: Zwolle, The Netherlands, 1989:

15-29;

ABSTRACT | Presents epidemiological data on children aged 2-18 in Denmark, Finland,

Norway, and Sweden. The impacts of chronic disability on the individual, the family, and the community are discussed. Provided is an overview of trends in medical services: early detection and diagnosis, reliable and comprehensive assessment of the child and the family, coordinated treatment planning, immediate treatment, continuing care and periodic review of the treatment plan, social services, and integration. This is one chapter in a book that addresses many issues

regarding youth with disabilities.

EDITOR Ludlow BL; Turnbull AP; Luckasson R;

BOOK Transitions to Adult Life for People with Mental Retardation—Principles and

Practices.

SOURCE Paul H. Brookes: Baltimore, MD, 1988: 380.

ABSTRACT | Examines policy issues, principles, and practices of transition within the context

of the American service delivery system. Focuses on a transition process that

includes development of vocational, personal, and social skills.

AUTHOR | Mariga L; McConkey R;

TITLE Home-based learning programmes for mentally handicapped people in rural

areas of Zimbabwe.

SOURCE | Int J Rehab Res 1987; 10(2): 175-83;

ABSTRACT Describes a community-based rehabilitation programme in rural Zimbabwe for

children and young adults who are mentally handicapped. Included are details on the staff, local agencies, clients, resources, and goals of the programme. The partnership with local agencies, training and monitoring of the staff, and the use

of resources are highlighted as critical to the programme's success.

AUTHOR | Michalsen H; Foller as S; Bentsen BS;

TITLE | Social-medical aspects of cystic fibrosis in Norway. III. The education and

occupation of mothers.

SOURCE | Scand J Gastroenterol (Suppl. 143) 1988: 60-4;

ABSTRACT | This study found that mothers of children and adolescents with cystic fibrosis

(CF) in Norway discontinued or halted progress in their education more often than mothers of children without CF (who, in turn, did so more often than fathers of children with CF). Career interruption or obstructed career progress was even more common among mothers of children with CF. Fathers' education and careers were generally unaffected by their child's CF status. The authors conclude that traditional sex-role values persist within families, and that such values may exert greater influence in families with chronically ill children. Note that the differences in likelihood of career/school continuances were more strongly associated with

gender than with the child's CF status.

EDITOR | Reynolds GD;

BOOK Proceedings from Mainstreaming Activities for Youth (Project MAY). Congresses

and Conferences.

SOURCE Office of Special Education and Rehabilitative Services: Washington, DC, 1981:

388;

ABSTRACT | A collection of papers from Project MAY (Mainstreaming Activities for Youth).

Included is an international overview of the state of the art of services and programs for people with disabilities, cultural universals in mainstreaming, and strategies for mainstreaming from the United Kingdom, Sweden, Canada, and

the United States.

Shanmugam IS:

TITLE SOURCE Socio economic problems of the orthopaedically handicapped persons.

Int J Rehab Res 1983 Mar.; 6(1): 82-3;

ABSTRACT

Investigated economic and psychosocial problems of people (age 10-40) with orthopaedic disabilities in India. Results indicate that economic problems are more prevalent than psychosocial problems, and that due to various socioeconomic problems, treatment of many patients with orthopaedic disabilities

tends to be irregular and lasts less than one year.

BOOK

Disabled Village Children. A Guide for Community Health Workers.

Rehabilitation Workers, and Families (1st Edition).

SOURCE

Hesperian Foundation: P.O. Box 1692, Palo Alto, CA 94302, 1987: 703;

ABSTRACT

Basic information is provided in this illustrated reference book on children and youth with disabilities in developing countries. Emphasis is placed on basic practice issues: examination, prevention, identification, measurement, recording salient information, assistive devices, exercises, management techniques, strategies to facilitate adjustment, community organization, educational issues, vocational issues, and social issues. Successful programs are described, including Project Projimo and Project Plaxtla in Mexico where this text was field-tested.

Price: \$15.00.

III. HEALTH SERVICES

AUTHOR

Bax MCO: Smyth DPL; Thomas AP;

TITLE

Health care of physically handicapped young adults.

SOURCE

Br Med J 1988 Apr; 296(6630): 1153-5;

ABSTRACT | This needs assessment, conducted in London and Buckinghamshire, England, identified the health needs of a group of young adults (n = 111, 18-25 years of age) with moderate to severe disabilities. Generally, the health status of these individuals was poor. Less than one-third were receiving appropriate health care. Regular health care declined greatly after they left school and the health care access it afforded.

AUTHOR

Brewer EJ; McPherson M; Magrab PR;

TITLE

Family-centered, community-based, coordinated care for children with

special health care needs.

SOURCE

Pediatrics 1989 Jun; 83(6): 1055-60;

ABSTRACT |

A general description of the basic tenets of family-centered, community-based coordinated care for the United States health care system is given. Suggestions for solutions to current problems in implementing such a system include: case managers and community health teams; the role of tertiary medical centers; and the coordination and financing of care. The role of pediatricians, problems they encounter, and potential strategies they may use to better provide services to children with special health needs are detailed.

Bruce T:

TITLE

Emotional sequelae of chronic inflammatory bowel disease in children and

SOURCE

Clin Gastroenterol 1986 Jan; 15(1): 89-104;

ABSTRACT Begins with a review of emotional effects of chronic illness and psychosomatic notions of inflammatory bowel disease. This article goes on to describe in detail a program at a British hospital which brought a psychiatric care team and a pediatric care team together to address both the physical and psychological effects and possible causes of Crohn's disease.

TITLE SOURCE Psycho-social problems of diabetic children and adolescents.

Acta Diabetol Lat 1984 Jan; 21(1): 35-46;

ABSTRACT

Description of how the Bulinson Medical Center in Israel addresses psychosocial issues concerning childhood and adolescent diabetes from diagnosis through treatment. The disease is described in terms of its psychosomatic and somatopsychic nature, which lends itself to a multidisciplinary team approach. Such a team might consist of psychologists, social workers, dieticians, nurses, and pediatric endocrinologists. Ambulatory care is recommended, whenever possible. Education and group discussion are necessary aspects of treatment to address such areas as: family relations, school, courting and marriage, employment, technology, self-monitoring, and the possible organic complications of diabetes.

The health status of mild to moderate intellectually handicapped adolescents.

J Ment Defic Res 1986 Jun; 30(Part 2): 121-8;

ABSTRACT

This study used multiple measures to assess the health status of 51 youth. The operational definition of health included measures of deviant behavior, social competence, and use of health services, as well as physical status. The purpose of the study was to conduct a needs assessment of health services in the British special education population. The authors conclude that findings indicate this population is underserved, particularly with regards to psychosocial functioning.

Int J Adolesc Med Health 1986 Jul; 2(3): 163-8;

ABSTRACT

Two major problems confront the adolescent with epilepsy: the problems of the seizures and the negative stigma of society towards epilepsy. To help cope with the problems of this disability, special epilepsy centers have been established. The experience in a recently opened center in Israel is presented with emphasis on family counselling, learning problems, and vocational rehabilitation.

BOOK Vocational Training in Ireland.

EDITOR Dooney R; Duane P;

SOURCE | European Centre for the Development of Vocational Training: Berlin,

West Germany, 1985: 63-77;

ABSTRACT

This chapter includes a section on vocational training for people with disabilities in Ireland. This training is largely carried out by voluntary organizations which are funded by the state. Ireland's National Rehabilitation Boara acts as the coordinating body for these organizations. It provides vocational assessment, guidance, and placement; it also educates trainers. The vocational system for people with disabilities is placed in the larger vocational and social context of Ireland. The system for people with disabilities focuses on initial entry into the job market. The Rehabilitation Institute, founded in 1950, is the largest national voluntary organization in this field; a description of this organization is provided.

OECD Publication and Information Center: 2001 "L" St. NW, Suite 700,

Washington, DC 20036, 1986: 68:

ABSTRACT

An international study of the transition to adult working life by youth with disabilities in member nations of the Organization for Economic Cooperation and Development. Three stages of transition are identified: the final years of schooling, continued education, and early adult working life. Innovative practices are described and transition is conceptualized. Proposed criteria for evaluating transitional arrangements include assessment of objectives, family and community involvement, and financial arrangements. Recommendations are presented based on findings.

TITLE The Scandinavian Folk High School: A model for the education and

integration of handicapped youth. Except Child 1985 Jul; 32(2): 121-7;

ABSTRACT The Scandinavian Folk High School is an educational institute

The Scandinavian Folk High School is an educational institute that helps young persons in their transition from adolescence to adulthood. Some of the schools are designed specifically for students with handicaps, but also serve a smaller number of nonhandicapped peers. Between the Scandinavian countries of Sweden, Norway, Finland, and Denmark, there are 400 of these schools, each with approximately 100 students enrolled. This article describes the schools and their

curricula as well as their funding sources in detail.

TITLE

Disabled school leavers. Which way to tomorrow?

SOURCE

Rehabil World 1985 Spr; 9(1): 34-5;

ABSTRACT

A discussion of the educational and employment difficulties likely to face adolescents with disabilities in the United Kingdom. School leavers with disabilities have difficulty competing for jobs because they often do not have the necessary academic qualifications and have inadequate levels of personal independence. The Manpower Services Commission (MSC) and the Youth Training Scheme (YTS) are two government programs designed to assist young people with disabilities. Employment agencies can often provide assistance, but long-term unemployment does not appear to be common for school leavers with disabilities. Day centers in local communities sometimes provide small jobs at low pay. A suggested solution is the removal of both architectural and attitudinal barriers.

Accommodation of adults who are mentally retarded in community colleges:

A national study.

SOURCE

Educ Train Mentally Retard 1987 Dec; 22(4): 262-7;

ABSTRACT

Two hundred community colleges across the United States were surveyed concerning programs for persons who have mental retardation. It was found that students who have mental retardation are present on more than one-third of community college campuses. Programs for students who have mental retardation range from those that are specifically geared for them to others that have been adapted to accommodate their special learning needs. Most of the respondents (73%) indicated that they believed they had a legitimate role in providing services for persons with mental retardation. Obstacles are discussed.

TITLE Hearing-impaired children in Venezuela: 1985.

SOURCE | Int J Rehab Res 1987; 10(2): 185-95;

ABSTRACT | A survey of J4 Venezuelan children (age 3–14) with hearing impairments

provides data on service delivery, demographics, incidence rates, and causes of hearing impairments. In general, the findings are very similar to those in the United States although, in Venezuela, communicable diseases cause significantly more hearing impairments, and only one student reported receiving regular

classroom instruction with hearing students.

AUTHOR | Stude EW;

TITLE | Special education and vocational rehabilitation in the Federal Republic of

Germany.

SOURCE | J Rehabil 1986 Apr; 52(2): 32-6;

ABSTRACT | This article presents an overview of German systems. Emphasis is placed on the

methods used to prepare people with disabilities for employment and to educate teachers and rehabilitation workers who assist them in these efforts. Rehabilitation counseling in Germany is discussed, and the positive and negative aspects of the

special education and vocational rehabilitation systems are described.

AUTHOR | Togonu-Bickersteth F; Odebiyi AI;

TITLE Vocational capabilities of the deaf as assessed by the deaf and non-deaf in

Nigeria.

SOURCE | Int J Rehab Res 1986; 9(3): 283-6;

ABSTRACT | Compares the perceived vocational potential of individuals with hearing

impairments as assessed by 680 students (age 14–18) in Nigeria both with and without hearing impairments. Findings indicate that both the general public and people with hearing impairments have a low opinion of the vocational potential of individuals with hearing impairments. In addition, researchers found a large discrepancy between the idealistic and realistic occupational aspirations of

individuals with hearing impairments.

AUTHOR Toomey JF; O'Callaghan RJ;

TITLE Adult status of mildly retarded past-pupils from special education.

Part II: Social adaptation.

SOURCE | Int J Rehab Res 1983 Sep; 6(3): 301-12;

ABSTRACT | Investigated the social adaptation of 382 young adults (age 15-32) in Ireland

who have mild mental retardation. Results indicate that IQ and age are associated

with successful social adaptation, and that males and those with lower

socioeconomic status tend to exhibit a higher degree of independence. Although

many young adults in Ireland with mild mental retardation tend to make

satisfactory social adjustments, a substantial number of young adults experience

social isolation.

Alternative Futures for the Education of Students with Severe Disabilities.

EDITOR

Baine D;

SOURCE

Unversity of Alberta: Edmonton, Canada, 1988: 96-103;

ABSTRACT

The On Campus Program of the University of Alberta is described. This Canadian program serves 11 students with moderate to severe disabilities. The program relies on a philosophy of encouraging: generic setting, integrated activities, life-long learning, enhanced self-esteem, life-enriching experiences, improved employment opportunities, normative and challenging expectations, and opportunities for associations and connections. Each student develops an individual integration plan to identify and organize activities appropriate to individual needs, interests, and strengths. Activities include: classes, recreation, and social interactions. (Available through EDRS, ED#310568. U.S. callers dial: 1-800-227 ERIC.)

The Transition to Adulthood of Youth with Disabilities.

SOURCE

Youth and America's Future: The William T. Grant Foundation Commission on Work, Family, and Citizenship: Institute for Educational Leadership, Suite 310, 1001 Connecticut Ave., NW, Washington, DC 20036-5541 Mar: 95;

ABSTRACT

This paper provides an overview of the issues surrounding this transition for American youth with disabilities. The economic, social, and educational disadvantages common in this population are described. Current programs and interventions that can meet some of the needs of transitioning youth are presented. Research, policy, and practice recommendations are provided. Specific interventions discussed include: work experience programs, work skills preparation, employer-focused initiatives, rehabilities ation engineering, use of occupational information, job-seeking skills preparation, transition planning, parental/family support interventions, and community-based collaborative intervention models.

TITLE

The number of mentally retarded—A result of steps taken by society? Changes in the age structure among mentally retarded persons in Sweden.

SOURCE

Res Dev Disabil 1988; 9(2): 135-43;

ABSTRACT

A cross-sectional survey of 35,793 people in Sweden with mental retardation indicates that, although the overall proportion of people with mental retardation has not changed, the proportion of children and young adults has decreased and the proportion of adults has increased. Changes are attributed to prenatal diagnosis, improved practices in obstetrics, introduction of antibiotics, and improvements in the medical and social care of people who are mentally retarded.
